GetSwift Technologies headquartered in New York, has an established technology hub in Colorado and serves customers in more than 70 countries with its recurring revenue and systems integration technology platforms. GetSwift Delivery technology platforms provide a comprehensive secure, cloud-based Software-as-a-Service solution that automates a variety of business operations (last-mile, same day, recurring deliveries, and scheduling) for its customers. The Logo subsidiary is an information and technology firm specializing in establishing and managing data centers and telecommunications infrastructure.

Key Investment Considerations:

Initiating GetSwift Technologies with a Speculative Buy rating and 12-month price target of \$0.75 per share.

The company has substantial growth potential for its GetSwift Delivery technology platforms that provide its customers a secure, cloud-based recurring revenue solution that automates a variety of business operations centered on delivery management primarily for last mile, same day, and recurring product deliveries.

Analysts and consulting firms have published estimates that predict the global last mile delivery market should experience annualized revenue growth of nearly 9.3% to over \$200 billion in 2027 and the global same-day delivery services market achieving 22.1% annualized growth to \$11.4 billion by 2025. Primary growth drivers for these markets will be increased use of software technologies and companies changing their habits to meet consumer needs due to adapting to the new normal caused by global COVID-19 pandemic conditions.

In 1Q22, the company announced a partnership agreement with Uber Technologies, Inc. that when fully deployed and integrated, US customers will have access to Uber's pool of drivers and vehicles to supplement existing drivers so as not to lose a delivery order. The company's communication technology services segment received an information technology contract from the Ministry of Trade, Tourism and Telecommunications, in the Republic of Serbia. The two year contract value is expected to exceed €24 million.

For FY22, we project a net loss of \$2.3 million or (\$0.07) per share, on 54.8% revenue growth to \$30.7 million reflecting customer acceptance of the GetSwift Delivery platforms and completed work related to a contract from the Republic of Serbia.

For FY23, we project a net loss of \$1 million or (\$0.03) per share on 20.5% revenue growth to \$37 million reflecting 65% recurring revenue growth to \$10.2 million from the GetSwift Delivery Platforms, as well as maintaining cost controls from the cost cutting program that began in 1Q22.

Please view our Disclosures pages 15 - 17

Appreciation Potential

Initiating GetSwift Technologies Limited with a Speculative Buy rating and 12-month price target of \$0.75 per share. Our rating and price target reflects projected revenue growth and a significant narrowing of operating losses to approximately \$1 million in FY23 from \$20.4 million reported in FY21. In FY23, we anticipate the company’s recurring revenue technology subscription services segment will grow 65% reaching nearly \$10.2 million from an estimated \$6.2 million in FY22. In FY21, that segment generated revenue of nearly \$4.5 million. The company’s communication technology services segment should maintain a global customer base (primarily in Europe) that we forecast will generate revenue of at least \$24 million and nearly \$27 million in FY22 and FY23, respectively.

Our 12-month price target of \$0.70 per share implies shares could nearly triple over the next twelve months. According to finviz.com (as of 12/10/21), the average price-to-sales multiple for companies with similar market capitalizations in the software application, communications equipment, and Internet information industries is 1.2X, compared to GetSwift’s trailing price-to-sales multiple of 0.4X. We anticipate investors are likely to accord GetSwift a multiple that is between the industries multiple and its current trailing multiple. We applied a price-to-sales multiple of 0.8X to our FY23 (ending June 30, 2023) sales per share forecast of \$1.12, discounted for execution and financial risks, to obtain a year-ahead price target of approximately \$0.75 per share.

GetSwift’s valuation improvement is contingent upon growing revenues from its two segments technology subscription services and communication technology services, as well as seeing reduced costs from the company’s cost reduction program. Increased revenues and reduced operating costs should enable the company to reduce cash outflow from operating activities to \$2 million in FY23 from an estimated outflow \$6.4 million in FY22. In FY21 cash outflow was \$14.6 million.

We believe GetSwift Technologies Limited is most suitable for risk tolerant investors seeking exposure to a micro cap company providing last mile, same day, and recurring product delivery logistics software platforms and systems integration solutions to a global customers base.

Overview

GetSwift Technologies headquartered in New York, has an established technology hub in Colorado and serves customers in more than 70 countries with its recurring revenue and systems integration technology platforms. The company has operating subsidiaries in North America, Europe, and Australia. Its GetSwift Delivery technology platforms (includes the 2019 acquisitions of Delivery Biz Pro and Scheduling+) provides a simple and secure, cloud-based recurring revenue Software-as-a-Service (SaaS) solution that automates a variety of business operations centered on delivery management for its customers. The chart on the right shows the flow of how the technology operates. The GetSwift Delivery platforms are designed to be directly integrated with a customer’s (retailers, couriers, restaurants, food distributors, etc.) online ordering or point of sale system and is already integrated with major global point of sale and online order platforms (such as Clover, Square, Givex, OLO, Clorder, Eat24, Grubhub, Dash, and at least eight more). The company’s technology enables orders (by its customer’s customer) to flow directly into the GetSwift Delivery dashboard so that an order is dispatched to the nearest driver in real-time.

The company’s technology is designed to reside on an interface that enables its customer’s to have access in order to make the most prudent analytical use of data collected as the GetSwift Delivery platforms are used. An important aspect of the company’s technology are the embedded algorithms that are continually being improve and updated. One embedded algorithm dispatches orders based on distance giving the driver the most efficient route in order to

minimize delivery time and reduce fuel costs. Another algorithm knows and continually updates the capacity of the driver’s vehicle by combining vehicle size with order size and the logistics of packing the order onto the vehicle.

The Logo subsidiary is an information and technology firm specializing in establishing and managing data centers and telecommunications infrastructure.

GetSwift through its operating subsidiaries are focused on business logistics and automation, data management and analysis, communications, information security, and infrastructure optimization. The company’s technology and communications infrastructure offerings are deployed and used globally by public and private sector customers.

History

In 2013, the company’s technology was initially developed by its co-founder Joel Macdonald and deployed in Australia through an alcohol e-commerce business called Liquorun. That operation focused on managing last mile deliveries based on technology that provided customers with a secure, stable and scalable delivery management system, and improved the management and analysis of local delivery operations. The Liquorun dispatch technology was redeveloped into a standalone platform and rebranded and commercialized under the GetSwift Group.

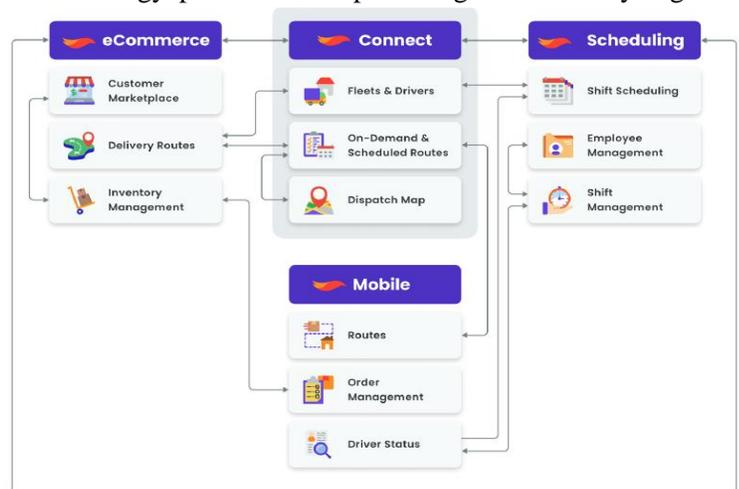

In 2015, GSW Australia (formerly named Distributed Logistics Group Pty. Ltd.) became the parent company of the GetSwift Group as part of the restructuring of legacy businesses of Liquorun and GSW Australia that were both incorporated in 2013.

In December 2016, GSW Australia completed its initial public offering (IPO) of 25 million shares on the Australian Stock Exchange at an issue price of A\$0.20 per share for aggregate gross proceeds of A\$5 million. As part of the IPO, Distributed Logistics Group Pty. Ltd. name was changed to GetSwift Limited.

On September 4, 2020, the company entered into an agreement to relocate from Australia to Canada. On October 1, 2020, the company’s shareholders voted in favor of relocation from Australia to Canada. The relocation of the company’s common stock was legally effective on January 4, 2021, which meant the company’s shares were suspended from trading on Australian stock exchange and then delisted. Pursuant to the overall relocation agreement, GSW Australia became a direct wholly-owned subsidiary of GetSwift Technologies Limited. On January 13, 2021, the Canadian NEO exchange approved the listing of the company’s common shares under the symbol GSW. The company’s shares trade in the US on the OTC market under the symbol GTSWF.

Operations

The company’s mission is to provide their customers technology platforms to optimize global delivery logistics primarily for last mile delivery management in order to provide easy-to-use, innovative delivery management software to assist its customers in managing and improving their supply chains. The chart on the right (April 2021 presentation) shows the company’s technology offerings and how they fit together.

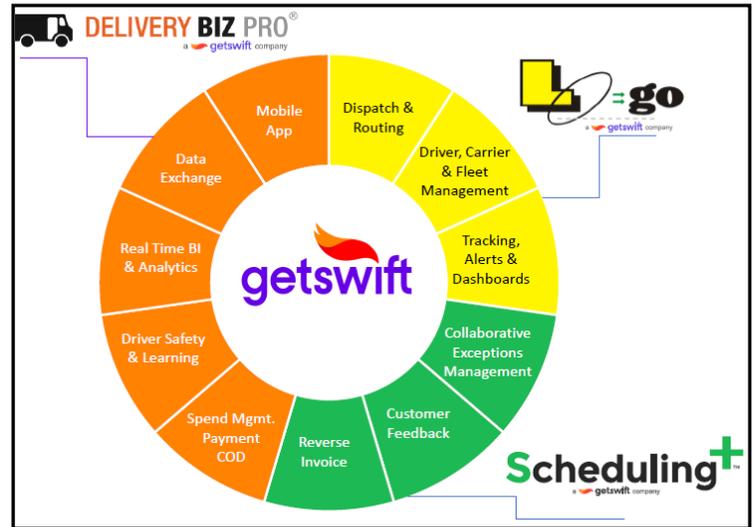

The company reports its revenue generating operations within two segments, technology subscription services (TSS) and communication technology services (CTS). Overall the company generates revenue from contracts with its clients by offering a suite of software, products and services.

Revenue from the company’s CTS segment is primarily generated from its Logo operation, in which a 60% ownership interest was acquired in February 2020. Logo’s customers utilize its cloud communications, communications infrastructure and services that includes consulting, design, construction, and maintenance offerings.

Logo specializes in building network and communication centers, establishing and managing data centers, telecommunications infrastructure, information security, infrastructure safety systems, and building automation systems. Logo’s offerings when deployed by a customer is typically an integral part of their public and/or private network, infrastructure, and information security operations.

The company’s TSS segment generates recurring subscription revenue from its GetSwift Delivery technology platforms that includes the operations of Delivery Biz Pro and Scheduling+ (acquired in 2019). The individual offerings within each segment are shown in the chart on the right from the company’s April 2021 presentation. One of the most important elements to the company’s delivery technology offering is the ability to have all the data of a customer captured in its reporting application that provides a breakdown of the data. The data can be used by customer to make data-first decisions in order to improve their own delivery operation and thus improve revenue and reduce costs.

Delivery Biz Pro (DBP) offers a comprehensive all-in-one eCommerce delivery management platform that provides its customers automated logistics management technology. A key to this operation is its ability to scale along with the growth of a customer’s operations. DBP is focused on SaaS customers that require recurring product orders. The company’s customer based is served in the following delivery verticals - meals, produce, alcohol, dairy, diapers, dry cleaning, oxygen and propane tanks, and waste management. DBP builds its customer’s Website so their customers can browse, fill their carts, enter delivery times, and eventually track the driver route. DBP’s technology offering provides customers a backend system that tracks daily operations and allows for a detailed view of sales data, as well as tracking drivers and allowing a driver to receive payments from the end consumer, obtain directions, capture signatures, and return deposits.

Scheduling+ (SP) offers its customers an end-to-end technology platform that enables staff scheduling, task management, time and attendance, recordkeeping, and payroll into a single subscription-based cloud solution. This offering is designed to enable its customers of any size to reduce time spent on employee management (the chart on the right shows some of SP’s customers).

Key features of the SP offering is reducing overtime costs and streamlining employee scheduling via email and text. The offering reduces the time a customer spends on employee scheduling and its payroll process, which overtime should reduce labor costs. The SP technology platform is used as a tool in order to prevent employees from reaching overtime levels through alerts that shows when an employee is within a certain number of hours of overtime. The SP technology platform allows employees to clock in from anywhere, or from one workplace portal, which should prevent buddy punching and early clock-ins, as well as an open shifts component that enables employees to self-schedule themselves which saves a manager’s time.

SP is integrated with the GetSwift Delivery technology platforms, so it can be sold as a unified technology or cross sold to an existing customer.

Growth Strategy

The company aims to grow its operations through the continued development of machine learning algorithms and data analytics within its GetSwift Delivery technology platforms. GetSwift is also focused on increasing its global brand awareness among businesses of all types for its delivery services and enterprise customers for its communications infrastructure offering.

The company has positioned its technology offerings within the intersection of the e-commerce/retail solutions and delivery management and workforce sectors for its global customers. The company anticipates its delivery as a service technology offering will enable its customers to choose the right courier in exchange for the company receiving a transaction fee. Additional revenue is expected to come from the company's Scheduling+ technology offering as it can be fully integrated within the GetSwift Delivery offering.

The company is developing programs to expand its logistic and employee management technology platforms offerings to new verticals such as construction, infrastructure, and resource distribution and management.

The technology subscription services segment is seeking to develop partnerships to enhance their customer's delivery logistics opportunities to generate revenue from them and GetSwift. In September 2021, the company announced a partnership agreement with Uber Technologies, Inc. that when fully deployed and integrated, both existing and new clients across the US will have access to Uber's pool of drivers and vehicles to supplement existing drivers so as not to lose a delivery order. The partnership will expand over time to Canada, Mexico, Brazil and Australia.

The communication technology services is an important growth vehicle for the company. In July 2021, the company announced that this segment received an information technology contract from the Ministry of Trade, Tourism and Telecommunications, in the Republic of Serbia. The two year contract value is expected to exceed €24 million (subject to currency fluctuations). The contract calls for the implementation of telecommunication and computer equipment for the purpose of improving the communications infrastructure in Serbian schools and localities. Building and upgrading a technology infrastructure that improves the reliability of telecommunications (including 5G technology deployments and upgrades) is vital to the future of GetSwift and should enable future growth of its recurring revenue offerings as reliable communications and technology infrastructure is needed to properly execute last mile delivery logistics for its new and existing customers.

Projections

Basis of Forecast

Supporting our forecast is the organic growth the company is experiencing within its technology subscription services (TSS) and communication technology services (CTS) revenue generating segments. The GetSwift Delivery offerings are gaining customer acceptance and increased brand awareness in North America and Europe. The company's CTS segment is working on a number of large deployments primarily in Europe that includes an information technology contract from the Ministry of Trade in the Republic of Serbia. In FY23, we anticipate CTS segment revenue reaching \$26.8 million, up from an estimated \$24.5 million in FY22 and \$15.3 million reported in FY21. In FY23, we anticipate TSS segment revenue growth of 65% to nearly \$10.2 million compared to projected revenue of \$6.2 million in FY22. In FY21, the company's TSS reported revenue of \$4.5 million.

As the company files its financial reports in Canada, it does not report costs of sales; therefore its forecasts do not include gross margin analysis.

At June 30, 2021, GetSwift had US tax loss carryforwards of \$1.7 million that expire in 2036 and 2037 and \$32.6 million that can be carried forward indefinitely.

Economy

In October 2021, the International Monetary Fund (IMF) revised its global economic growth estimates to an increase of 5.9% for 2021 and 4.9% for 2022. While the IMF's growth projection for 2022 is unchanged from its earlier projection (July 2021), the 2021 projection is down from 6%. The 2021 downward revision primarily reflects supply disruptions and worsening pandemic dynamics.

The IMF revised its economic growth estimate for the US to an increase of 6% for 2021 and 5.2% for 2022. In July 2021, the IMF projected US economic growth of 7% and 4.9% for 2021 and 2022, respectively.

The second estimate of US GDP growth (released on November 24, 2021) showed the US economy increased at an annual rate of 2.1% in 3Q21, down from the 6.7% increase reported in 2Q21. The 3Q21 US GDP estimate primarily

reflects increases in inventory investment, consumer spending, state and local government spending, and business investment, partially offset by decreases in housing investment, federal government spending, and exports.

Operations FY22 (ending June 30)

We project 54.8% total revenue growth to \$30.7 million from \$19.8 million in FY21 supported by 37.3% growth in the company's recurring revenue TSS segment to nearly \$6.2 million and 60% revenue growth in its CTS segment to \$24.5 million.

We project the operating loss narrowing to \$5.4 million from \$20.4 million in FY21. The narrowing of the operating loss reflects revenue growth and operating margin expense improving to 117.5% from 203% last year. We forecast operating expenses decreasing 10.2% to \$36.1 million compared to \$40.2 million in FY21 due primarily to a 42.3% decline in G&A expense to \$12.2 million reflecting cost containment initiatives that began in 1Q22. Partly offsetting the decrease in G&A expense is a 62.1% increase in operating expenses to \$16.7 million to support growth in the company's CTS segment. We anticipate employee benefits costs of \$7.1 million compared to \$8.8 million last year due to reduced headcount. We project share-based payments of \$77,000 compared to \$112,000 in FY21.

We project other non-operating income of \$3.1 million compared to an expense of \$3.3 million. Our annual forecast reflects income and gains reported in 1Q22.

We project a net loss of \$2.3 million or (\$0.07) per share compared to a loss of \$23.5 million or (\$0.77) per share.

Finances – FY022

We project cash outflow of \$6.4 million and a \$1.3 million expense from investing activities related to the purchase of property and equipment. Party offsetting cash outflows and expense from investing activities is \$2.8 million from financing activities primarily from proceeds from a line of credit. We anticipated cash to decrease by \$4.9 million to \$2.5 million at June 30, 2022.

Operations – FY23 (ends June 30)

We project 20.5% total revenue growth to \$37 million from an estimated \$30.7 million in FY22 driven by 65% revenue growth in the company's recurring revenue TSS segment to nearly \$10.2 million and 9.3% revenue growth in the CTS segment to \$26.8 million.

We project the operating loss narrowing to \$1 million from an estimated \$5.4 million in FY22. The narrowing of the operating loss reflects revenue growth and operating margin expense improving to 102.8% from an estimated 117.5% last year. We forecast operating expenses increasing 5.4% to \$38 million compared to an estimated \$36.1 million in FY22 with all four expense categories (G&A, employee benefits, operating expenses, and share-based payments) increasing to support revenue growth.

We are projecting no non-operating income or expense compared to income of \$3.1 million last year. We project a net loss of \$1 million or (\$0.03) per share compared to a loss of \$2.3 million or (\$0.07) per share.

Finances – FY23

We project cash outflow of nearly \$2 million and \$1 million of expense from investing activities related to the purchase of property and equipment. Party offsetting cash outflows and expense from investing activities is \$2 million from financing activities primarily from proceeds from the issuance of common stock. We anticipated cash to decrease by \$961,000 to \$1.5 million at June 30, 2023.

Market Briefs

GetSwift Delivery technology platforms are positioned to take advantage of the market trends in last mile, same day, and recurring deliveries as it will provide its customers with software technology offerings to make such deliveries easier and more efficient than having to build one in-house. The GetSwift offering is positioned between companies that provide e-commerce/retail solutions and delivery management and workforce solutions (see chart on top of next page).

Last Mile Delivery

In September 2021, consulting firm Brandessence Market Research published The Global Last Mile Delivery Market report that forecasts annualized revenue growth of nearly 9.3% to over \$200 billion in 2027 from \$108 billion in 2020. Growth in the last mile delivery market should be driven by a sustained increase in online orders by consumers. A significant number of consumers are prepared to pay extra charges for a fast delivery that is resulting in higher demand for last mile deliveries.

Same Day Delivery

In December 2021, ReportLinker.com published a report that forecast the global same-day delivery services market growing to over \$5.1 billion in 2021 from nearly \$4.5 billion in 2020. The report projects 22.1% annualized growth to over \$11.4 billion by 2025. The growth reflects companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact. Growth will be seen in all commerce categories - business-to-business, business-to-consumer, customer-to-customer.

Telecommunications Infrastructure

In October 2021, Global Market Insights issued a report projecting the telecom Network Infrastructure Market should grow annually by 4% to \$120 billion in 2027 from an estimated \$90 billion in 2020. Growth is anticipated to be driven by the increased demand for deploying 5G network technology that will create better speed and connectivity features.

In October 2021, Fortune Business Insights published a report indicating that the global 5G infrastructure market could reach \$80 billion by the end of 2027.

1Q22 Financial Results

1Q22

The company reported revenue decreased nearly \$300,000 to \$7.2 million compared to \$7.5 million in 1Q21, but increased 63.8% compared to \$4.4 million in 4Q21. The sequential increase in revenue reflects increased adoption of the company’s products and services. It also stems from higher than anticipated communication technology services sales as revenue was pulled ahead from what was anticipated in 2Q22.

In 1Q22, 51% of the customer revenue was represented by a single customer compared to a 38% from a single customer in 1Q21.

The company does not report costs of sales, but did report expenses decreased to \$8.9 million from nearly \$14 million in the year-ago period. The reduction in operating expenses is due primarily to a \$4.1 million decrease in G&A expense to \$3.1 million reflecting lower legal fees of \$3.5 million to \$385,000 stemming from the company moving its operations and common stock listing from Australia to Canada in 1Q21 compared to no similar expense in the current period. Two other components of G&A expense that experienced reductions were a \$214,000 decline in Website expenses to \$201,000 due to the engagement of a new cloud vendor and a \$206,000 decrease in professional fees to \$394,000. Additional decreases occurred from a reduction in employee benefits to \$1.7 million from \$2.2 million due to a reduction in the company’s workforce in Australia. While operating expenses decreased \$431,000 to nearly \$4.1 million stemming from lower warranty provisions and a reduction in the material costs, it was partially offset by higher service cost due to the change in customer mix.

Loss from operations was \$1.7 million compared to \$6.4 million in the year-ago period due primarily to operating margin expense improving to 123% from 186% in 1Q21, partly offset by a 4% revenue decrease. The overall decrease in operating expenses reflects the implementation of a cost reduction program and streamlining of operations.

Non-operating income was \$3.1 million compared to an expense of \$1.3 million in the year-ago period. The swing to non-operating income reflects foreign currency exchange gains due to changes in the Australian dollar versus the US dollar.

The company reported net income of \$1.4 million or \$0.05 per share compared to a net loss of \$7.8 million or (\$0.26) per share.

Finances

In 1Q22, the company reported cash used in operating activities of \$4.9 million due primarily to payments of suppliers and employees. Proceeds of \$3.2 million from a line of credit did not cover cash used in operations, capital expenditures, and partial repayment on the company's line of credit and lease payments. Cash decreased \$2.6 million to nearly \$4.7 million at September 30, 2021.

Capital Structure

The company's Logo subsidiary entered into line of credit agreements enabling GetSwift to borrow funds up to \$10.1 million euros through several lenders with terms expiring through May 2022 and interest rates based upon 1 month to 6 month EURLIBOR plus 2.2% to 2.7%. The line of credit may be drawn at any time and may be terminated by the bank without notice. At September 30, 2021 there was an outstanding balance of over \$3.3 million.

In March 2020, GetSwift entered into a put option agreement with LDA Capital LLC (an alternative investment group), which agreed to provide the company with up to \$45 million in committed equity capital through March 2023. Capital call elections by the company will be subject to the requirements and limitations of the terms of the share lending agreement. The purchase price of shares by LDA will be based on certain criteria including GetSwift's daily trading volume and weighted average price during specified periods, as well as LDA entering into a share lending agreement with a holder of currently outstanding shares. The company also agreed to issue up to 565,650 unlisted options to LDA Capital proportional to the amount subscribed by LDA Capital under the agreement. As of September 30, 2021, the company has no intention to use the put option to fund operations.

Competitive Landscape

GetSwift competes in markets that are highly fragmented, intensely competitive, and experience shifting user preferences, as well as frequent introductions of new services and offerings. The competitive environment includes merchants and consumers, as well as local food delivery logistics services. Last mile delivery services are fragmented and intensely competitive and competition includes local food delivery logistics platforms such as Uber Eats (and their acquisition of Postmates), Grubhub, Doordash, Deputy, Aaptean, Deliverr, Onfleet, and Instacart.

Most of GetSwift's competition have more financial resources, and product development, engineering, infrastructure, and marketing experience. In order to remain competitive, since the company is likely to see competition from new entrants, it will need to invest in R&D, marketing, sales and client support.

Management

Bane Hunter – Executive Director and CEO. He was appointed CEO of GetSwift Australia in April 2018. He has over 20 years of experience in fintech, media and entertainment, venture technology. His prior experience includes chief project officer at MTV Networks and acting CEO of The Loop, senior executive director at Conde Nast, and head of information services program delivery at Foxtel in Sydney. Most recently, was a board member of startup accelerator BlueChilli Group, which invests in young companies. Holds a Masters of Business Administration and earned various certifications (project management, strategic project leadership, IT service management, and ScrumMaster®).

Joel MacDonald – President and Co-Founder. He was appointed as a director of GetSwift Australia in March 2015 and as President in April 2018. MacDonald is an entrepreneur and former professional Australian Football League athlete. Co-founded one of Australia's first alcohol e-commerce platforms and was also a founder of an on-

demand logistics company and hospitality payment platform. Other entrepreneurial initiatives include experience managing a US real estate investment company. Earned a Bachelor of Business degree at Monash University in Melbourne, Australia.

Rob Bardunias – COO and CFO. He most recently was one of the co-founders and chief revenue officer of Iris.TV, a video intelligence platform that helps leading publishers build more engaged audiences. He also led the global branding and growth strategy for the native advertising network MGID Inc. His experience is leading global companies through partnerships, new technologies, and specialized marketing. As COO at GetSwift, he manages its partnerships in Europe and Asia, as well as its public financial disclosure filings.

Risks

In our view, these are the principal risks underlying the stock.

Operating Losses – Going Concern

At September 30, 2021, the company's accumulated loss was \$68.7 million, up from \$46.4 million at June 30, 2020. GetSwift has yet to turn an annual operating profit. In FY21 the operating loss was \$20.4 million compared to an operating loss of \$23.1 million in FY20. While we anticipate operating losses narrowing during our forecast period, if our expectations are not achieved, it could result in the company's inability to execute its growth strategy.

The company's continuation as a going concern will depend upon its ability to generate sufficient cash flow and/or raise sufficient capital to meet its future obligations. The plan to eliminate the company's going concern situation includes improving cash flow, maintaining moderate cost reductions, creation of additional sales and profits across its product lines, as well as obtaining sufficient financing opportunities.

Limited Operating History

The company and its subsidiaries have a limited history of operations and is therefore subject to many risks including being under-capitalization, experiencing cash shortages, having limitations with respect to personnel and financial resources and revenue variability.

Dilution

The company has a reasonable expectation that it should be able to obtain additional capital to fund its operations from external parties. However, if the company were to raise additional capital through issuances of equity or convertible debt securities, it would likely be dilutive to existing shareholders.

COVID-19 Global Pandemic

A disruption of US economic conditions lies in the global spread of COVID-19. Any global disruptions of economic activity or could adversely impact corporate operating results.

Regulatory Environment

The company's global operations must comply with local, regional, and national regulations. Achievement of the company's growth strategy is contingent, in part, upon compliance with necessary and applicable regulatory requirements enacted by governmental authorities and obtaining all regulatory approvals necessary. No assurance can be given that the company will be able to maintain its licenses, permits, or authorizations to growth operation.

Acquisition Risks

The company utilizes acquisitions as part of its growth strategy. Acquisitions that expand the company's operations in North America or in other parts of the world are likely to require management's time and effort. The diversion of management could reduce revenues and/or operating profits from the new or existing operations.

New Product Development

Coordinating the design, development, and launch of new product offerings to meet changing customer demand is and will continue to be challenging and costly. To develop new offerings, the company would likely need to expend

capital in order for those offerings to gain acceptance and generate meaningful revenue. If new offerings do not gain acceptance it could have an adverse effect on the company's operations.

Reliance on Software and Systems

The company relies on proprietary software, hardware and third-party software products and services from a number of different providers for its management information systems. Disruptions to any of these systems could negatively impact the ability of the company to provide its offerings to existing customers, thus impacting operations.

Intellectual Property

The company must have the ability to protect proprietary products, services, and technologies. Failure to file patent applications in the US, Canada, Australia, and other countries would likely diminish the company's ability to protect its proprietary products and technologies. Also, patents may only provide limited protection of the company's intellectual property since protecting patents could be costly.

Cyber Security and Privacy Concerns

Security breaches could expose the company to a risk of loss of its customers' information, litigation and possible liability. While security measures are in place, they may be breached as a result of third-party action, including intentional misconduct by computer hackers, employee error or malfeasance and result in someone obtaining unauthorized access the company's information technology systems, its customers' or its own data, including intellectual property and other confidential business information.

There can be no assurance that efforts to prevent significant breakdowns, breaches in systems, or other cyber incidents will be successful. Incidents related to cyber security events could have a material adverse effect upon the company's reputation, business, operations or financial condition.

Legal and Regulatory

Prior to the company's relocation to North America it was an Australian based and publicly traded company. The company has ongoing legal proceedings and regulatory actions primarily related to the Australian securities and investments commission within the Australian court system. Those actions could financially impact the company in future periods depending on the outcome of those actions. There is also a class action lawsuit against the company in Australia due to disclosure issues. Details can be found in the company's sedar.com filings.

In the US, the company has a pending action against it from a former employee for breach of contract. This action is in its early stages. The claim against the company is approximately \$400,000.

Shareholder Control

Officers and directors collectively own or have a controlling interest in approximately 34.3% of the company's outstanding voting stock as of June 30, 2021 (based on an annual filing with Sedar). Collectively this ownership could potentially greatly influence the outcome of matters requiring stockholder approval. These decisions may or may not be in the best interests of the other shareholders.

Miscellaneous Risk

The company's financial results and equity values are subject to other risks and uncertainties, including competition, operations, financial markets, regulatory risk, and/or other events. These risks may cause actual results to differ from expected results.

Trading Volume

Average daily volume over the last three months (ending December 10, 2021) was 8,200 for the company's OTC traded GTSWF symbol in the US. While average shares traded over the last three months on the NEO Exchange in Canada for GSW was approximately 3,500. GTSWF has a float of approximately 20 million shares and outstanding shares of 30.8 million.

Important Disclosures

As of the date of this report, we, our affiliates, any officer, director or stockholder, or any member of their families do not have a position in the stock of the company mentioned in this report. Taglich Brothers, Inc. does not currently have an Investment Banking relationship with the company mentioned in this report and was not a manager or co-manager of any offering for the company with in the last three years.

All research issued by Taglich Brothers, Inc. is based on public information. In November 2021, the company paid Taglich Brothers a monetary fee of \$4,500 (USD) representing payment for the creation and dissemination of research reports for three months. Three-months after publication of the initial report (April 2021), the company will begin paying Taglich Brothers a monthly monetary fee of \$1,500 (USD) for the creation and dissemination of research reports.

General Disclosures

The information and statistical data contained herein have been obtained from sources, which we believe to be reliable but in no way are warranted by us as to accuracy or completeness. We do not undertake to advise you as to changes in figures or our views. This is not a solicitation of any order to buy or sell. Taglich Brothers, Inc. is fully disclosed with its clearing firm, Pershing, LLC, is not a market maker and does not sell to or buy from customers on a principal basis. The above statement is the opinion of Taglich Brothers, Inc. and is not a guarantee that the target price for the stock will be met or that predicted business results for the company will occur. There may be instances when fundamental, technical and quantitative opinions contained in this report are not in concert. We, our affiliates, any officer, director or stockholder or any member of their families may from time to time purchase or sell any of the above-mentioned or related securities. Analysts and members of the Research Department are prohibited from buying or selling securities issued by the companies that Taglich Brothers, Inc. has a research relationship with, except if ownership of such securities was prior to the start of such relationship, then an Analyst or member of the Research Department may sell such securities after obtaining expressed written permission from Compliance.

Analyst Certification

I, Howard Halpern, the research analyst of this report, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities and issuers; and that no part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this report.

Public Companies mentioned in this report:

DoorDash, Inc.	(NYSE: DASH)	Zebra Technologies	(NASDAQ: ZBRA)
Lightspeed Commerce Inc.	(NASDAQ: LSPD)	Shopify Inc.	(NYSE: SHOP)

Meaning of Ratings

Buy – The growth prospects, degree of investment risk, and valuation make the stock attractive relative to the general market or comparable stocks.

Speculative Buy – Long-term prospects of the company are promising but investment risk is significantly higher than it is in our BUY-rated stocks. Risk-reward considerations justify purchase mainly by high risk-tolerant accounts. In the short run, the stock may be subject to high volatility and could continue to trade at a discount to its market.

Neutral – Based on our outlook the stock is adequately valued. If investment risks are within acceptable parameters, this equity could remain a holding if already owned.

Sell – Based on our outlook the stock is significantly overvalued. A weak company or sector outlook and a high degree of investment risk make it likely that the stock will underperform relative to the general market.

Discontinued – Research coverage discontinued due to the acquisition of the company, termination of research services (includes non-payment for such services), diminished investor interest, or departure of the analyst.

Some notable Risks within the Microcap Market

Stocks in the Microcap segment of the market have many risks that are not as prevalent in Large-cap, Blue Chips or even Small-cap stocks. Often it is these risks that cause Microcap stocks to trade at discounts to their peers. The most common of these risks is liquidity risk, which is typically caused by small trading floats and very low trading volume which can lead to large spreads and high volatility in stock price. In addition, Microcaps tend to have significant company-specific risks that contribute to lower valuations. Investors need to be aware of the higher probability of financial default and higher degree of financial distress inherent in the microcap segment of the market.

From time to time our analysts may choose to withhold or suspend a rating on a company. We continue to publish informational reports on such companies; however, they have no ratings or price targets. In general, we will not rate any company that has too much business or financial uncertainty for our analysts to form an investment conclusion, or that is currently in the process of being acquired.
